LISTING OF CLAIMS

1       1 (Currently Amended). A foldable tent having eaves includes a covering [1] and a foldable  
2       frame [2] and at the top of the side of which a foldable eave frame [3] extending outwardly is  
3       provided, foldable eave frame [3] being folded together with frame [2] and the covering [1] is put  
4       on the frame [2] that is characterized in that said eave frame [3] is an n-shaped frame composed of  
5       a front side and two lateral sides, the front side is composed of foldable scissors frames [4] and the  
6       number of which is same to that of the cross beam [8] of the corresponding side of the frame [2]  
7       between two poles, each of the lateral sides is composed of a scissors frame [4] which is  
8       composed of two cross pieces pivotally connected to each other in the midway, the scissors frames  
9       [4] forming the front side of the n-shaped eave frame [3] are pivotally connected to each other at  
10      the two ends of each scissors frames [4], the two opposite ends of each scissors frame[4] are  
11      pivotally connected to the two corresponding outer ends of the scissors frame [4] on the lateral  
12      sides to form flexion points, the inner ends of the scissors frames [4] of the lateral sides are  
13      respectively connected to the ~~an~~ upper pivot [6] and a lower pivot [7] on pole [10].

1       2 (Previously Presented). A foldable tent having eaves according to claim 1 that is  
2       characterized in that said eave frame [3] is an n-shaped frames composed of a front side and two  
3       lateral sides, and the front side is composed of foldable scissors frames [4] and the number of  
4       which is same to that of the crossbeam [8]of the corresponding side of the frame [2] between two  
5       poles, the two lateral sides of the eave frame [3] are composed of two vertically arranged scissors  
6       frames [4], each of the scissors frames [4] is composed of two cross pieces pivotally connected to  
7       each other in the midway, the scissors frames [4] forming the front side of the n-shaped eave frame  
8       [3] are pivotally connected to each other at the two ends of each scissors frames [4], two ends of  
9       the upper scissors frame [4] forming the lateral side are pivotally connected to the two  
10      corresponding ends of the lower scissors frame on the same side, the outer ends of the upper  
11      scissors frame and the lower scissors frame of the lateral sides are pivotally connected to the two  
12      corresponding ends of the scissors frame [4] on the front side to form flexion points, the inner

13 ends of the scissors frame[4] of the lateral sides are pivotally connected to the upper pivot [6] and  
14 lower pivot [7] on pole [10] respectively.

1 3 (Previously Presented). A foldable tent having eaves according to claim 1 or claim 2 that  
2 is characterized in that a T-shaped pivot [5] is provided at the upper connection point of the  
3 scissors frames [4] of the front side to connect a tie rod [9], the other end of the tie rod [9] is  
4 pivotally connected to the another T-shaped pivot [5] provided at the lower connection point of the  
5 scissors frames [4] of the cross beam [8] of the corresponding side of the framework between two  
6 poles.

1 4 (Previously Presented). A foldable tent having eaves according to claim 1 or claim 2 that  
2 is characterized that the eave frames [3] can choose to be provided either at all sides, or at two  
3 opposite, or only at one side of the framework [2] with a covering [1] that matches the framework  
4 [2] having eaves put on framework [2].

1 5. CANCEL CLAIM 5.

1 6 (Currently Amended). A foldable tent having eaves according to claim 1 or claim 2 that is  
2 characterized in that ~~one end of said scissors frame [4] is connected to one end of the another~~  
3 ~~scissors frame [4]~~ ~~an upper end of each one of said two cross pieces of said scissors frame [4]~~ is  
4 ~~connected to a lower end of each other of said two cross pieces of said scissors frame [4]~~ through a  
5 joint [41].

1 7 (Currently Amended). A foldable tent having eaves according to claim 6 that is  
2 characterized in that clefs that are not on the same plane are provided on both ends of said joint  
3 ~~[41]~~, one cleft is rigid connected to ~~one end of the scissors frame [4] and the other cleft is slide~~  
4 ~~connected to one end of another scissors frame [4]~~ ~~a lower end of each other of said two cross~~  
5 ~~pieces of said scissors frame [4] and the other cleft is slide connected to an upper end of each one~~

6 of said two cross pieces.

8. CANCEL CLAIM 8.
